

# 8-BALL POOL

Intro to CS Final Project Presentation  
Begad, Myra, Siyona

# ABOUT GAME

"8-Ball Pool" is a digital adaptation of the classic 8-ball billiards game. It is designed for two players who compete by following standard 8-ball rules. The game incorporates realistic sound effects, detailed graphics, and physics-based mechanics, such as velocity and friction, to simulate an authentic pool-playing experience.

The goal of 8-ball pool is to pocket all of your designated group of balls (either solids or stripes), then legally pocket the 8-ball to win.

# GAMEPLAY AND SETUP

## Setup:

- Cue Ball: The white ball, struck by the cue stick.
- Object Balls:
  - Solids (1-7) and Stripes (9-15).
  - The 8-ball is the black ball, to be pocketed last.
- Balls are racked in a triangle, with the 8-ball in the center.

# GAMEPLAY AND SETUP

## Gameplay:

- Breaking: The player breaks the racked balls, and if they pocket a ball, they continue their turn and establish their group (solids or stripes).
- Turns: Players take turns attempting to pocket their group's balls. The player must strike their group ball first. If a ball is pocketed, the player continues their turn.
- 8-Ball Shot: Once all group balls are cleared, the player must call and legally pocket the 8-ball to win.

**Winning the Game:** The first player to legally pocket the 8-ball after clearing their group wins.

# FOULS AND ILLEGAL MOVES

## *Ball-in-hand fouls*

- Cue ball pocket: The opponent gets the ball in hand.
- No Rail / No Ball Hit: If the cue ball doesn't hit a ball or cause a ball to hit a rail.
- Wrong Ball First: The player hits an opponent's ball first or hits the 8-ball early.

## *Loss fouls*

- Early 8-Ball Pocketing: If the 8-ball is pocketed before all group balls, it's a loss.
- Wrong Pocket for 8-Ball: Pocketing the 8-ball in an uncalled pocket is a loss.

The background is a pixel art scene. At the top, there are three pixelated clouds in shades of blue, purple, and yellow. In the center, the words "GAME DEMO" are written in a large, white, pixelated font with a red outline. Below this, a red rectangular box contains the URL "https://zone.msn.com/en/8ballchampion" in white text. On the left and right sides, there are pixelated fountains with yellow water spraying upwards. At the bottom, there is a brown wooden bench with three horizontal slats, set against a green grassy field with small blue and pink flowers. The entire scene is rendered in a low-resolution, pixelated style.

# INTENDED CLASSES

01

BALL:

## Attributes

- ID: int
- radius: int
- type: Str
- img: image
- position: int[]
- velocity: float[]
- Friction: float

## Methods

- check\_collision()
- update\_position()
- display()

**CueBall(Ball)**

# INTENDED CLASSES

02

TABLE:

## Attributes

- pockets: Pocket[]
- dimensions: int[]
- cue\_ball: CueBall
- balls: Ball[]
- img: image

## Methods

- check\_pocket()
- setup()
- display()

# INTENDED CLASSES

03

## STICK:

### Attributes

- angle: float
- power: float
- img: image
- dimensions: int[]

### Methods

- strike()
- adjust()
- display()

04

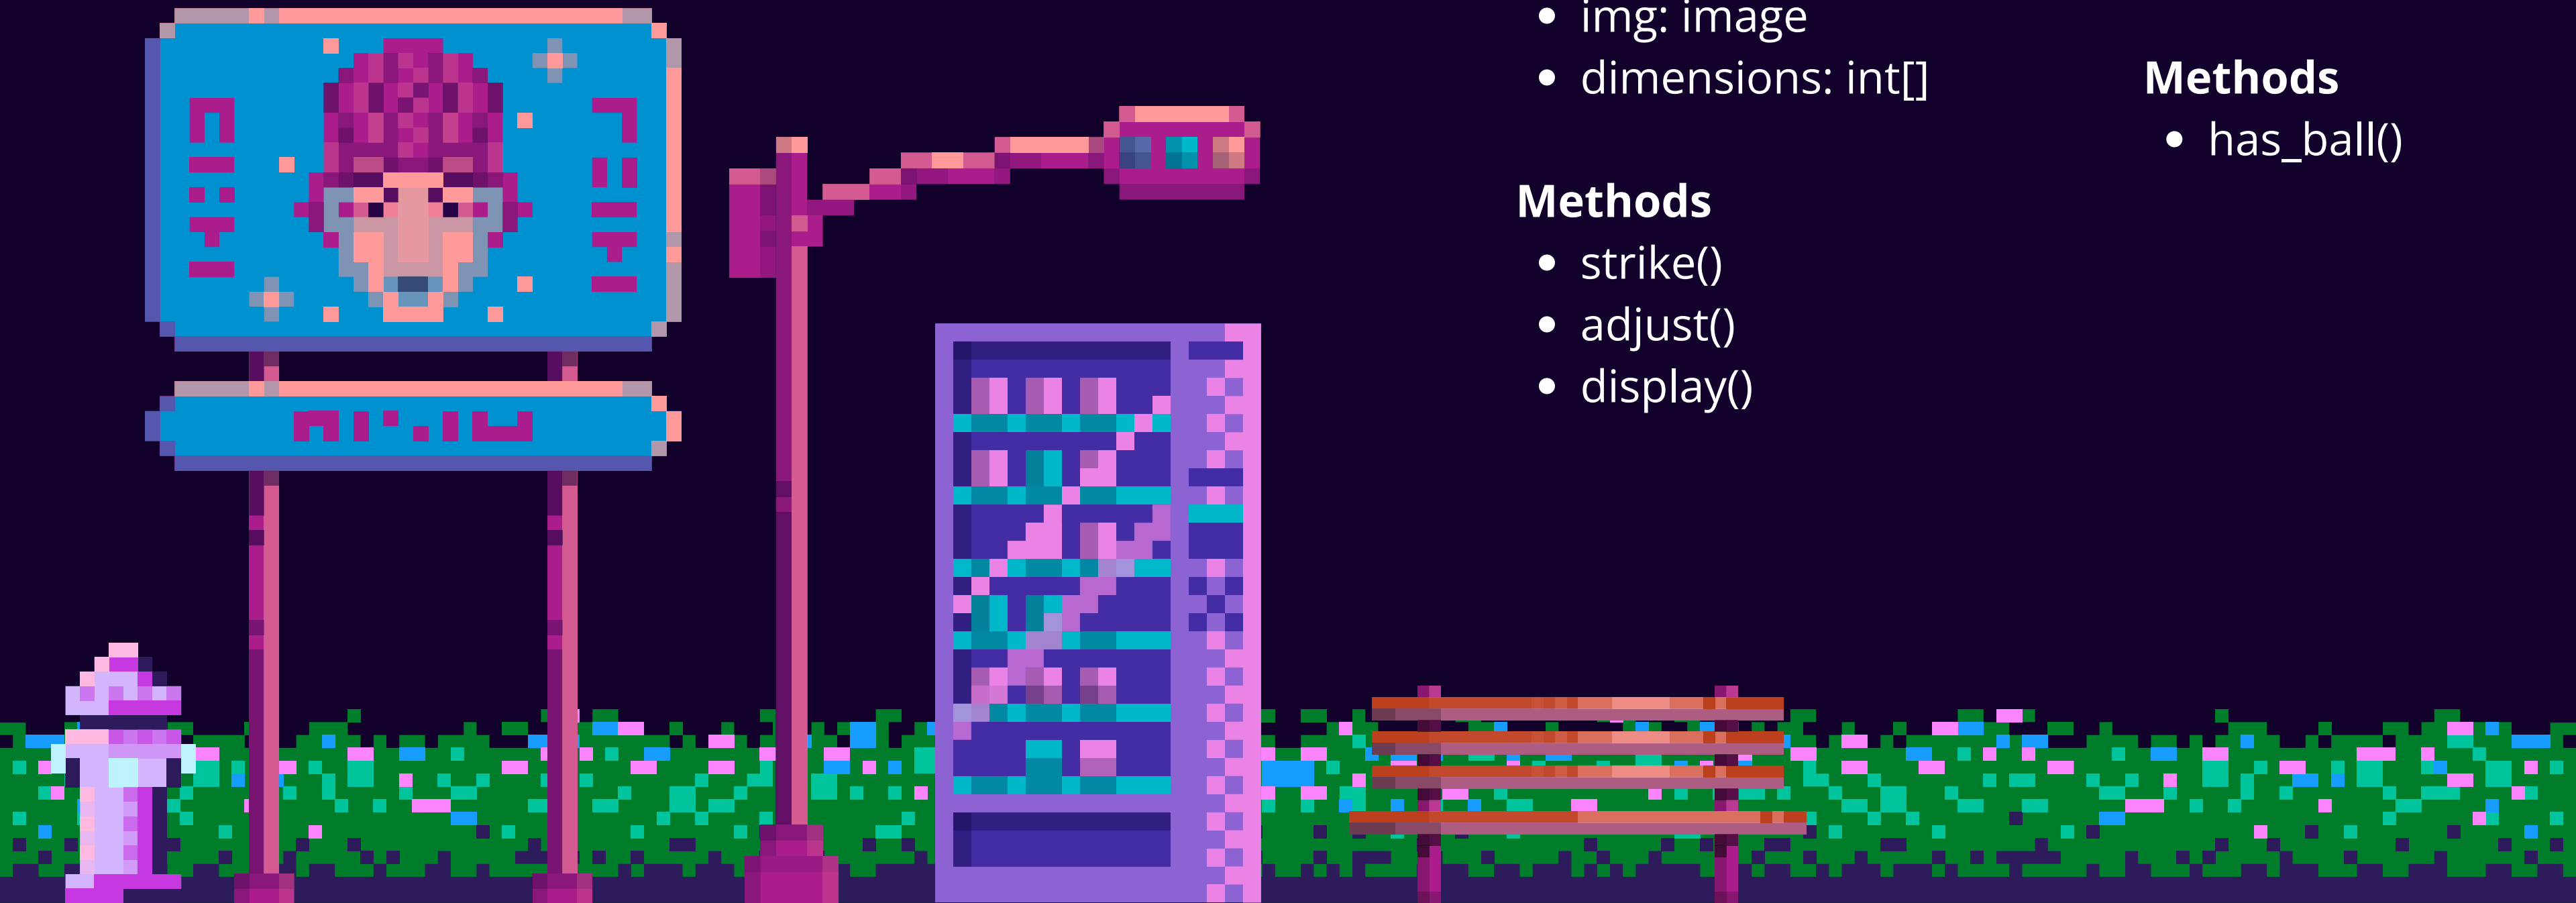

## POCKET:

### Attributes

- position: int[]
- radius: int

### Methods

- has\_ball()

# INTENDED CLASSES

05

PLAYER:

## Attributes

- name: Str
- ball\_group: Str
- score: int
- img: image

## Methods

- move\_cue()
- adjust\_angle()
- strike()
- display()

# INTENDED CLASSES

06

## GAME:

### Attributes

- table: Table
- score: int
- players: Player[]
- cur\_player: int
- game\_state: Str

### Methods

- reset()
- switch\_turn()
- check\_foul()
- check\_win()
- display()

# FORMULAS

Let  $P=(x,y)$  be the position of the ball and  $V = (v_x,v_y)$  its velocity vector.

## Collision with Vertical Rail

- **Condition:**
  - If the ball hits the left rail:  $P_x \leq 0 + \text{radius}$
  - If the ball hits the right rail:  $P_x \geq W - \text{radius}$

- **Equation:**

$$V' = (-v_x, v_y)$$

## Collision with a Horizontal Rail

- **Condition:**
  - If the ball hits the upper rail:  $P_y \leq 0 + \text{radius}$
  - If the ball hits the lower rail:  $P_y \geq H - \text{radius}$

- **Equation:**

$$V' = (v_x, -v_y)$$

# FORMULAS

## Collision with Another Ball

- Condition:

$$distance(P_1, P_2) = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \leq 2 \cdot radius$$

- Equation:

$$\Delta P = (x_2 - x_1, y_2 - y_1)$$

$$\hat{n} = \frac{\Delta P}{||\Delta P||}$$

$$v_{rel} = (V_1 - V_2) \cdot \hat{n}$$

$$V_1' = V_1 - v_{rel} \cdot \hat{n}$$

$$V_2' = V_2 + v_{rel} \cdot \hat{n}$$

# DATA REQUIRED

01

## Graphics:

- Balls
- Stick
- Table
- Player avatars

02

## Audio:

- Strike
- Collide
- Pocket
- Win
- Music

03

## Numerics:

- Ball radius
- Table dimensions
- Pocket spacings
- Friction

# OUR WISHLIST

1. Ball animation
2. Menu: (New Game, Settings, How To Play...)
3. Player usernames
4. Themes
5. Avatar Selector

THANK  
YOU
